

## Health & Safety Related Services

**Every year thousands of workers are injured in job related incidents,** and of course, the amount of new or revised regulations increases in response to these incidents. Most small businesses find it difficult to keep up-to-date with current regulations. Employers also find it difficult to take essential employees away from their day-to-day obligations to provide health and safety oversight for the company.

Bay Environmental Strategies, Inc. (BAY) can assist you with your safety program by providing professional services that promote all aspects of an effective health and safety program in accordance with the Occupational Safety and Health Administration's (OSHA) 29 CFR 1900 series regulations. We offer complete health and safety management services, including the development of written programs and completion of annual training requirements.

BAY also offers on-site and off-site management systems. Depending on your needs and budgeting constraints, BAY can either develop a site-specific health and safety management program for you or address specific areas in which your facility may need assistance. At BAY, we understand that health and safety does not generate money for business, but we also know that it can cost companies money through fines, employee lost time, and increased insurance premiums.

*The following is a list of Health and Safety programs with which BAY can assist your facility:*

- Accident/Injury Tracking
